

44. The reaction between ammonia and oxygen is given:  $2 \text{NH}_3(\text{g}) + 2 \text{O}_2(\text{g}) \rightarrow \text{N}_2\text{O}(\text{g}) + 3 \text{H}_2\text{O}(\text{l})$ . We therefore know that which of the following reactions can also occur?
- a)  $4 \text{NH}_3(\text{g}) + 5 \text{O}_2(\text{g}) \rightarrow 4 \text{NO}(\text{g}) + 6 \text{H}_2\text{O}(\text{g})$       c)  $\text{N}_2\text{O}(\text{g}) + 3 \text{H}_2\text{O}(\text{l}) \rightarrow 2 \text{NH}_3(\text{g}) + 2 \text{O}_2(\text{g})$   
b)  $4 \text{NO}(\text{g}) + 6 \text{H}_2\text{O}(\text{g}) \rightarrow 4 \text{NH}_3(\text{g}) + 5 \text{O}_2(\text{g})$       d) none of the above
45. The equilibrium constant,  $K_c$ , for the reaction  $2 \text{CH}_2\text{Cl}_2(\text{g}) \leftrightarrow \text{CH}_4(\text{g}) + \text{CCl}_4(\text{g})$  is  $2 \times 10^2$  at some specific temperature. Assuming that you start with only  $\text{CH}_2\text{Cl}_2$ , describe the relative abundance of each species present at equilibrium.
- a)  $[\text{CH}_4]$  and  $[\text{CCl}_4]$  will be significantly smaller than  $[\text{CH}_2\text{Cl}_2]$ .      d) Can't tell without more information.  
b)  $[\text{CH}_4]$  and  $[\text{CCl}_4]$  will be significantly larger than  $[\text{CH}_2\text{Cl}_2]$ .  
c)  $[\text{CH}_4]$  and  $[\text{CCl}_4]$  will be approximately equal to  $[\text{CH}_2\text{Cl}_2]$ .
46. The equilibrium constant,  $K_c$ , for the reaction  $2 \text{SO}_3(\text{g}) \leftrightarrow 2 \text{SO}_2(\text{g}) + \text{O}_2(\text{g})$  is  $6.34 \times 10^{-2}$  at 1110 K. What is the value of  $K_c$  at this temperature for the related reaction  $\text{SO}_3(\text{g}) \leftrightarrow \text{SO}_2(\text{g}) + 1/2 \text{O}_2(\text{g})$ ?
- a)  $6.34 \times 10^{-2}$       b)  $3.17 \times 10^{-2}$       c)  $4.02 \times 10^{-3}$       d) 0.252
47. The equilibrium constant,  $K_c$ , for the reaction  $\text{NH}_4\text{Cl}(\text{s}) \leftrightarrow \text{NH}_3(\text{g}) + \text{HCl}(\text{g})$  is  $5.10 \times 10^{-6}$  at 298K. If an equilibrium mixture of the three compounds in a 7.41 L container at 298K contains 2.89 mol of  $\text{NH}_4\text{Cl}(\text{s})$  and 0.237 mol of  $\text{NH}_3$ , the number of moles of HCl present is:
- a)  $1.18 \times 10^{-3}$  moles      b)  $1.59 \times 10^{-4}$  moles      c)  $2.15 \times 10^{-5}$  moles      d)  $6.22 \times 10^{-5}$  moles
48. A student ran the reaction  $2 \text{CH}_2\text{Cl}_2(\text{g}) \leftrightarrow \text{CH}_4(\text{g}) + \text{CCl}_4(\text{g})$  in the laboratory at 300 K. When she introduced  $8.55 \times 10^{-2}$  moles of  $\text{CH}_2\text{Cl}_2(\text{g})$  into a 1.00 Liter container, she found the equilibrium concentration of  $\text{CCl}_4(\text{g})$  to be  $3.92 \times 10^{-2}$  M. Calculate the  $K_c$  she obtained for this reaction.
- a) 0.717      b) 30.5      c) 0.210      d) 0.458      e) 5.52
49. Consider the reaction  $\text{PCl}_5(\text{g}) \leftrightarrow \text{PCl}_3(\text{g}) + \text{Cl}_2(\text{g})$  where  $K_p = 0.497$  at 500 K. If the three gases are mixed in a rigid container so that the partial pressure of each gas is initially 1.00 atm, which is true?
- a) A reaction will occur in which more  $\text{PCl}_3$  is produced.      e)  $K_p$  will decrease.  
b)  $Q$  is greater than  $K$  so the reaction will go forward.  
c) The reaction is at equilibrium. No further reaction will occur.  
d) A reaction will occur in which more  $\text{PCl}_5(\text{g})$  is produced.
50. A student determines the value of the equilibrium constant for the reaction  $\text{CO}(\text{g}) + 3 \text{H}_2(\text{g}) \leftrightarrow \text{CH}_4(\text{g}) + \text{H}_2\text{O}(\text{g})$  to be  $1.56 \times 10^{25}$ . Based on this value of  $K_{eq}$  the  $\Delta G^\circ$  for this reaction is expected to be:
- a) greater than zero      b) less than zero      c) approximately equal to zero
51.  $\text{NO}_2$  is a reddish brown gas while  $\text{N}_2\text{O}_4$  is colorless. At high temperature the red color is strong. At low temperature the gas has less color. If the reaction is written  $2 \text{NO}_2(\text{g}) \leftrightarrow \text{N}_2\text{O}_4(\text{g})$  we can conclude that this reaction is:
- a) endothermic      c) neither exothermic nor endothermic  
b) exothermic      d) more info is needed to answer this question
52. The equilibrium constant,  $K_c$ , for the reaction  $2 \text{HI}(\text{g}) \leftrightarrow \text{H}_2(\text{g}) + \text{I}_2(\text{g})$  is  $1.80 \times 10^{-2}$  at 698 K. Calculate the equilibrium concentration of  $\text{I}_2$  if 0.328 moles of HI is initially introduced into 1.00 L vessel at 698 K.
- a) 0.259 M      b) 0.328      c) 0.0347 M      d) 0.0768

53. Consider the reaction  $2 \text{SO}_3(\text{g}) \leftrightarrow 2 \text{SO}_2(\text{g}) + \text{O}_2(\text{g})$  where  $K_c = 2.90 \times 10^{-2}$  at 1150 K. A reaction mixture was found to contain  $3.85 \times 10^{-2}$  moles of  $\text{SO}_3(\text{g})$ ,  $4.10 \times 10^{-2}$  moles of  $\text{SO}_2(\text{g})$ , and  $4.52 \times 10^{-2}$  moles of  $\text{O}_2(\text{g})$ , in a 1.00 Liter container. Is the reaction at equilibrium, and if not, what direction must it run in order to reach equilibrium?
- The reaction must run in the forward direction to reach equilibrium.
  - The reaction is at equilibrium.
  - Not enough information is available to make a prediction.
  - The reaction must run in the reverse direction to reach equilibrium.

54. Consider the following system at equilibrium where  $\Delta H^\circ = 18.8 \text{ kJ}$ , and  $K_c = 9.52 \times 10^{-2}$ , at 350 K:

When 0.35 moles of  $\text{CH}_2\text{Cl}_2(\text{g})$  are added to an equilibrium system at constant temperature what happens?

- The value of  $K_c$  increases.
  - The value of  $Q$  is greater than  $K$ .
  - The reaction must run in the forward direction to re-establish equilibrium.
  - The concentration of  $\text{CCl}_4$  will decrease.
55. Consider the following system at equilibrium where  $\Delta H^\circ = 111 \text{ kJ/mol}$ , and  $K_c = 6.30$ , at 723 K:

If the VOLUME of the equilibrium system is suddenly decreased at constant temperature:

- the value of  $K_c$  will increase.
  - the value of  $Q$  becomes less than  $K$ .
  - the reaction must run in the reverse direction to re-establish equilibrium.
  - the number of moles of  $\text{H}_2$  will increase.
56. Consider the following system at equilibrium where  $\Delta H^\circ = 87.9 \text{ kJ}$ , and  $K_c = 1.20 \times 10^{-2}$ , at 500 K:

If the temperature of a system at equilibrium is suddenly increased:

- the value of  $K_c$  suddenly increases.
  - the value of  $Q$  suddenly becomes greater than  $K$ .
  - the reaction must remain the same - already at equilibrium.
  - the concentration of  $\text{Cl}_2$  will start to decrease.
57. Consider the reaction  $\text{CO}(\text{g}) + \text{Cl}_2(\text{g}) \leftrightarrow \text{COCl}_2(\text{g})$  at equilibrium where  $K_c = 77.5$  and  $\Delta H^\circ = -108 \text{ kJ/mol}$  at 600 K. The production of  $\text{COCl}_2(\text{g})$  is favored by:
- increasing the temperature.
  - increasing the pressure (by changing the volume).
  - increasing the volume.
  - adding  $\text{COCl}_2$ .
  - removing  $\text{Cl}_2$ .
58. For the reaction  $\text{I}_2(\text{g}) + \text{Cl}_2(\text{g}) \leftrightarrow 2 \text{ICl}(\text{g})$ ,  $\Delta H^\circ = -26.8 \text{ kJ}$  and  $\Delta S^\circ = 0.0114 \text{ kJ/K}$ . What is the equilibrium constant for this reaction at 324 K? Assume that  $\Delta H^\circ$  and  $\Delta S^\circ$  are independent of temperature.
- a)  $5.73 \times 10^{-14}$     b) 30.5    c)  $1.21 \times 10^{-5}$     d)  $1.74 \times 10^{13}$     e)  $8.25 \times 10^4$
59. Which version of the quiz do you have?
- Version A
  - Version B
